New Retouch Menu provides quick access to supplied tools and groups, and adds a Panels section to view before and after layouts. Noise and Luminance tools now follow the Curves tool that allows a quick tweak of levels of the picture, and add a Spot Healing tool. Even better, all three tools work together. Two of the most popular Photoshop tweaks, Flatten Image and Fix Lighting, are two of the eight presets thrown into the retouch menu. Ultimately, the retouch menu offers greater customizability than it used to so that while viewers can still view the original photo, they can customize the edits being made. This offers flexibility to users who are not confident with color or customized edits yet. You can work with RAW files in Lightroom 5 by first opening the Raw Converter, then opening the RAW file with that tool. A new option, called "Open Layers" allows layers not to be flattened. This one is unique as layers and the original photo stays intact. Learning how to use it correctly may take some time. Adding an Adjustment Layer enables the position of that layer to be erased. Useful for when a layer doesn't align with the main object of the camera shot. Another new feature introduced with Lightroom 5 is Generate a Web Clip, which allows a web-hosted version of the photo to be created. New text tools like the OCR (optical character recognition) tool will identify text and add it to the project. Users of Lightroom can add Markers (placed manually on the images) and Free Transform Image commands automatically, along with undocumented commands to go along with Photoshop, like slide to frame.]
