That said, I've used Lightroom before, so I can't tell you how much it's changed in this release. (I did mention I'm not really a fan of the way Adobe has approached the user interface, but I already feel like I'm repeating myself.) There are some things I like about this new UI, as well as some things that annoy me. Let's start with the positives. Apple, since the original Mac launch of the Macintosh in its current form, has continuously made improvements to their desktop OS. From Renaming files to adding features like Time Machine, Back to My Mac to making it more user-friendly, from the original Mac OS to Mac OS X. Why wouldn't Adobe's software also follow suit? Is this a case of more Mac OS X features per OS release? I was really impressed when I started the installation of Lightroom. I had done Lightroom 4 a number of times on Windows XP, but the new version was designed to work efficiently and seamlessly with Windows 7. I immediately turned on the movie and slideshow in the Preferences menu. I also chose the Auto Import option so that extra corrections could be made to the RAW images immediately. I was on my way to *Learn Adobe Lightroom 5 in a Day!* Adobe Photoshop CC 2017 is a solid update for photographers. You get better usability and better speed. However, I miss several features introduced in CC 2015 that aren't in 2017. The fact that authors can use Adobe XD to write stories has the potential to change my view of this software. I see a future in which graphic design programs become more seamless in how they integrate storytelling with content creation. Personally, I think the future of Photoshop is in this direction. It's a great time to be a designer, and Photoshop could play a role in making it even better. (Photo: P+A/Shutterstock) Martha Stark is a well-known writer and drama teacher in the Los Angeles area, as well as an actress. In her new book, Martha reveals that, as a young girl, she was sexually abused by her stepfather. In a powerful essay published in the book, Martha shares her story, and urges other victims to come forward. Even though she's been speaking out publicly for years, Martha says that her book is the most important aspect to self-care—and that the full effect of what happened to her will only be felt after she's moved on to the next chapter of her life. "I keep thinking, 'Where's my book?' I wanted to get it out there. It's something I've been working on for four decades," Martha says. "It took us six months to do this, what it's like to write the book, to do this, to have the page count and the number of pages. People who are friends of mine have said, 'Are you sure you want to do this? Do you want to put this on your resume?' It was hard for me too." Don't miss Oprah's Top 10 Rules for Life, a weekly best-of show from Oprah Winfrey, now streaming. Watch it on Hulu. She says that, as a young girl, she couldn't name the relationship between herself and her stepfather, yet she remembers him as a distinctly different person from whom she was bursting to escape. The first time she remembers being touched by her stepfather was a traumatic experience. At 4 years old, she was in a kitchen with her family, and a man came in; in fact, he was her stepfather. "He was a former boyfriend of my mother. He isn't her husband, but [he] was a boyfriend of her parents. He was one of those guys." He was 34 years old, married with a child of his own. The man stayed with his family during the week and was the only man present in the house—no female relatives or immediate family. "I was the target of his uncontrollable sexuality," Martha says. "I wasn't even aware of the fact that he was molesting me.

Handling the yellow/blue setting is a common problem with the standard Photoshop. In most cases, the yellow/blue can be modified with the Warmth Freeze tool, which would make the white areas seem more warm and the yellow areas more blue. Adobe has added another alternative view into Gimp called Gimp which would allow combining of the two settings into one with the "Mix" context menu. If you want to search for a specific feature, you can search 'Photoshop' and type in the item. You can use the 'Look and Feel' of the 'Camera'/'Digital Camera' window as you see it above.
