Make sure that you begin your work in Photoshop with layers, which enables you to easily layer, cut, copy, and

paste components, along with changing the position of individual layers. In other words, use layers to lay down layers, and Photoshop has a whole host of commands that will help you combine, manipulate, and move them around on the canvas. The number of commands are like a drop-box listing of commands to do just about anything that you want to do

— which can sometimes lead to difficulty in remembering or finding the particular command you are looking for. So, the trick is to simply use layers to lay down components and then use Photoshop's command system to change, copy, move, and combine them. Knowing what layer types are and how to work with them is an important tool for editing

images in Photoshop. I cover layers in the "Creating and using layers" section later in this chapter. The ideal image size for any photograph is what I call the perfect image size, and I cover image sizes in the "Viewing, scaling, and fitting your images" section later in the chapter. ## Using a History List After you place an object or component on a layer, it's quite likely that you

need to work with it again. For example, say that you place an element on a layer and want to add a reflection to that layer. You might then have to place your reflection on a layer again in order to edit it. If you keep your working files on a computer that's connected to the Internet, you can use Photoshop's own History feature to browse through

your previously created work with the click of a button. If you're using Photoshop Elements, then you can also view the History feature in _Quick Fix,_ an Organizer button on the Quick Fix panel (see Figure 8-1). In the figure, I've clicked the Organizer button to display the History browser in the lower pane. I can see the images on the pages in this browser and

click the image on which to return to. FIGURE 8-1: Quickly return to a place in your work using the Organizer buttons on the Quick Fix panel. If the image you're editing is a web image, you can't use the browser in the Organizer to access your previous work in the browser. You can only access previous work at a web URL. However, you can access the History in the

Organizer but not directly from a web
