regex and not a whitelist. I am trying to match the string user: "test" against the following characters  
"!@#+\*" (upper case) var allowed = /^[!@#+\*]/ if (input.match(allowed)) { return true; } else {  
return false; } The problem is that the regex is not considering the \* character as a meta character  
for a character class, how do i escape these characters? A: \ has to be escaped, but the rest doesn't:  
var allowed = /^[!@#+\*]/ You can use \Q...\E instead: var allowed = /\Q[!@#+\*]\E/ or \Q...\E? if you  
also want to allow the quantifiers +? and \*? However, you can use /^[^!@#+\*]/ which is more  
readable and a bit more efficient. A: If I understood your question correctly, you are asking why? is  
treated as a quantifier in character class. To escape? you have to put it as \?, like so: var allowed =  
/[!@#+\*]/ Please read section 3.10.5 Character class in the MDN documentation for more  
information. print " (inflating \$ip/tcp/{/un}\$block\_ext)"; } elsif (\$block\_type eq "tcp-sec") { print "  
(inflating \$ip/tcp/{/proto}\$block\_ext)"; } elsif (\$block\_type ca3bfb1094

## What's New In AutoCAD?

Print as Image: For many tasks, AutoCAD's print function is a suitable option. But printing is so much more than just a way to print or preview a document. In AutoCAD, printing is also a way to send a project to the next step in the process – like a restaurant menu for example. The Print As Image function makes it easy to do just that. With Print As Image, you can print a specific area of your drawing to a file, or create a PDF or PostScript file with all of the objects, layers and text. You can easily adjust the printing settings and preview the result before you start the print job. If you would like to print to a specific printer, you can even print to the job tray of a PostScript or PDF printer. The Print As Image function is available in the Print menu in the Print dialog box. 3D Printing with DraftSight®: Need a 3D prototype for a product? Or maybe just a fun model to play with?
