Specialized functions can be found in certain Autodesk software applications, which are used for construction, land development, facility management, and construction planning and documentation. To be used as a quality application, AutoCAD must meet the requirements for general 3D application. The construction of a project starts with the drawing. Building the drawing using AutoCAD is a time consuming process. To speed up the process, one can use the drawing templates. In the design

In AutoCAD 2009, a new .NET Framework (shared.NET object) is added which can be accessed through the command line (MSDN), or from a plugin or through an AutoCAD API. In AutoCAD 2010, the .NET support in AutoCAD was enhanced, allowing AutoCAD to call programs written in other languages. AutoCAD 2010 introduced RADBuilder, a tool to make AutoCAD web applications for web pages and Internet Explorer add-on application by incorporating existing technologies. AutoCAD has a new XML File Format. AutoCAD has a new drawing architecture, the Drawing Engine (formerly known as "AutoLISP"). The new architecture replaced the original AutoLISP with JavaScript Object Notation (JSON) serialization which is, in effect, an object-oriented variant of JavaScript. Mycobacterium avium subspecies paratuberculosis (MAP) is a pathogen causing Johne's disease in livestock and paratuberculosis (PtB) in ruminants. MAP has not been detected in any free-ranging animal except for some studies on cattle. We isolated MAP from feces from a bison population in Kentucky that was submitted to the National Wildlife Research Center. Polymerase chain reaction (PCR) for MAP was also performed on the same sample. Bison PCR products and the control from the culture positive cow were digested with HaeIII and HinfI. Digestion products were resolved on agarose gels and the MAP-PCR band size of 1.3 kb was similar to that of the control. The band was not detected in three other bison tested. One positive and four negative samples were tested by culture. MAP was recovered from only

the positive sample. These results indicate that MAP may be present in bison and that the species may be capable of shedding the pathogen. What's New in the AutoCAD?

Refine designs with interactively colorized detail lines and annotate them with notes. (video: 4:19 min.) New live annotations: Import annotations from paper or PDFs and place them on the drawing for a 3D look (video: 4:27 min.) Do not interrupt your drawing to add annotations, set them and then return to your drawing. Set the value of your annotation and automatically update the drawing. (video: 4:58 min.) Add custom text to annotations and then export them as a PDF. Add multiple colors, brushes and multiple layers. (video: 2:03 min.) Markup can now be used in Live View. When a user picks a portion of a drawing, an interactive cursor appears for them to use. Markup Assist allows the user to interact with the drawing and annotate it. (video: 4:18 min.) A new title bar is available that allows you to turn off Live View and provide other view options, such as 2D or 3D, without leaving the annotation window. (video: 1:33 min.) Wrap-up: From the research department: The AEC industry is projected to become more complex and require more cross-functional collaboration. The professionals we surveyed agree that collaboration tools are critical to this transformation. This study revealed an exciting new future for AutoCAD. AEC designers can interact more with colleagues and clients, review designs, annotate documents, perform 3D design and review materials, and make more effective and efficient use of information to produce designs, documents, presentations and more. With the new capabilities in AutoCAD, you can improve the design

process and output of your projects faster and more efficiently. What's new in AutoCAD 2018 for Architecture Drafting: New methods for processing BIM data: Speed up the design process by creating a general plan of the site and have AutoCAD generate the site components based on it, such as walls, beams, columns and roof slabs. This is also helpful in creating site models, where your design intent needs to be represented. (video: 5:21 min.) Create general sites faster by importing and generating the component walls, beams, columns and roof slabs directly from the general plan. You can also place symbols and place them within other objects. For example, you can use the symbol to represent a roof
