Web App Programming Web apps are coded in HTML, CSS, and JavaScript, and are typically hosted within a Web page or Web application. They can run within the browser or be hosted on a separate server. Unlike ActiveX controls, they don't require any plug-ins to be installed. Applications and features that are written in Web apps include: Adding and removing AutoCAD objects using Javascript. Creating arrows, callouts, splines, and other objects using Javascript. Modifying and adding annotation on a drawing. Adding and modifying fields using Javascript. Creating shapes and symbols with Javascript. Modifying the dimensions of an existing object in a drawing. Adding a virtual element to a drawing. Using Javascript to add and delete specific drawing elements, or change the rendering or display of an element. Creating an action button in a Web page or Web app that will execute a command in AutoCAD. AutoLISP AutoLISP is the AutoCAD scripting language. AutoLISP is one of the most popular scripting languages for AutoCAD due to its easy-to-learn syntax. It was an integral part of the AutoCAD R13 product, but has since been dropped in favor of ObjectARX. Most people who use AutoCAD also have some exposure to AutoLISP, and many new users learn AutoLISP as the first scripting language they learn. However, the syntax of AutoLISP is generally considered hard to learn and use by AutoCAD programmers. AutoLISP is a very different language from languages used by other CAD software applications and even other Autodesk CAD software. AutoLISP uses a form of the Lisp programming language. This is part of the reason why AutoLISP scripts are so easy to write and modify. They are also called "macros" in this context, as opposed to "function" macros found in many other languages. AutoLISP scripts (called "macros" in AutoLISP) have the ability to recognize events that are triggered by user or AutoCAD input. These can be used to automate CAD tasks or just to make a script interactive. AutoLISP scripts can execute the same actions as standard AutoCAD commands, or they can execute more complex actions like switching between drawing views, or plotting an existing XY plane with custom data. AutoLISP also provides a number of utility functions, like random numbers, a1d647c40b
