Like the rest of the world, they had to settle for the last, sizably-priced, choices available: the Leica and Hasselblad. But with more and more people buying 35mm film, the prices began to stabilize, and the quality began to improve. Even though the Leica M10 camera predates the digital age by all of just over two years, its iconic design made it the best choice if you were a budding photographer. As digital cameras became more and more ubiquitous, so did the use of the still-popular 35mm film format. While film has technically been outdated for many years (we'll get to that), there were still many advantages to the medium. The primary one being that it was worth more than what you were paying for the film. However, even if you were wealthy, getting a camera in the early 2000s was like a game of Russian roulette.
