I have played around with the new Photoshop and there are some things I feel can be improved. Most of these are related to the UI. One of the things that can be improved is the anchor tool. I was having trouble with the anchor tool. It would be nice to have more features. One improvement would be having the ability to do pan and zoom on the image. It would be ideal for the anchor tool. This would be a big improvement. This should be on the to-do list for a future release. Another improvement that could improve workflow is better keyboard shortcuts. The current shortcuts are too hard to remember. They can be made more convenient. This would be good. Adobe Photoshop is still a great tool that wins awards and gets rave reviews. It still does what it does best. I think it's time to reconsider the switch to Apple's Photos app. I've used both on the MacBook Air I purchased for work with no glitch and sometimes Photos is really quite a bit better. As a comparison, I took this picture using a Fujifilm Finepix X10, then opened it in Photos on the same model and there were some artifacts that I didn't see in Adobe. A switch would really make a difference for me. That adds up to the all-around best digital camera of all time. Sure, I could bang out good enough photos with whatever camera I

have, regardless of brand, but some of the adjustments and textures in Lightroom CC are a joy to behold. Adoring photos with the latest version of your favorite software? (And you thought your new software was awesome!) Find out for yourself with a free copy of Lightroom Creative Cloud, and the Fujifilm FinePix X10.
