- **Multilayer PSD** (PSD stands for Photoshop document): Hundreds of layered filters, a palette of pre-designed templates, powerful features like curves and channels -- all this can be arranged in a single file. Unlike the image, a layered file is easier to manage and control.
- **Curves panel:** One of the most commonly used tools to edit the color values of an image. You can adjust the right side and the left side individually or just apply the effect overall on the entire image.
- **Channel Panel:** This panel controls the hue, saturation, and brightness of an entire image. It is useful when you have one image that has more than one color (like a car).
- **Color Panel:** The color panel provides a powerful tool to modify color gradients. It also can be used to create cool or warm gradients.
