I purchased Photoshop Elements software when I got my iPad in the beginning of 2010. Before I purchased the software and used it for beginners, I read different reviews which were very liking. Reviewed it for 3 weeks, and at that time I can say that it has everything. In short, I really like it.

I like everything about it, except I can't find after saving a file, it remembers the last settings so it resizes all of the pictures, I really don't like it. If I have a folder full of pictures, I would really like something to pick first. I hate it. I'm from Photoholic and just don't like anything with too much features as I can't use it well. But when I read that it has everything, I thought it would be like a silver bullet for beginners like me. I find myself getting so frustrated at this point with the update to Adobe Lightroom because of all the issues I had before. It is dumbing down and making it very hard to work. I have tried and tried and switched back and forth. I am so tired of it. LR5.3 is the last version I will ever use. I have been trying for over 3 months now to get a solution to this issue and I have nothing because I can't find anything that helps. I have tried every single video I could find and it is not to be fixed. I have IE8, watch on a Mac. I do not have any other problems except after saving my settings, it resizes all of my pictures sizes to the wrong sizes. I know it is because of IE8. It cannot be fixed. The only solution is to use Chrome or Firefox. FF saves the setting correctly, yet if I switch back to IE8, everything will be wrong again. I first used Firefox and it worked perfectly fine. Then I switched to IE8 and it worked perfect fine. But I decided to try IE8 again after saving my settings just to see what will happen. Bam, all of my pictures have changed! I should be able to use all of my Google apps, save my settings and use Firefox or Chrome to load everything. But no, in this version of LR, I have to use a browser that can save my settings correctly. FF is perfect but I can't use it because it can not save the setting correctly. I don't feel like this program should ever update or update again. It just feels like it was never intended to work. I feel like there is an error in the program somewhere that needs to be addressed. I don't know what to do anymore.

It is the content aware technique that allows Photoshop to analyze and fill the object with as much information as possible from the surrounding pixels.
