Tip: Photoshop CS3 or later is necessary to use all of the features in the Book IV, but CS2 also works just fine, although some features may not be available. There are several other image-editing programs such as Adobe Elements and Corel Painter, as well as GIMP, Paint Shop Pro, and other third-party software packages that allow you to perform many of the functions of Photoshop. Because some of them work in a similar manner as Photoshop, the list of features can vary, so check the company's own website for a complete list of the features. Adobe Photoshop also has a free Photoshop Elements version that's great for beginners and offers only some of the features found in the full version.

(Recently, we have been charged with a negative attitude toward the welfare of families. That is one of the reasons we are creating a system of family assistance. We want to develop, through such a program, an attitude which will, among other things, encourage the raising of large families. I do not want anyone to think that our program is a handout or charity program and do not care whether people are married, or not married, no matter how many children they have. It is the principal that welfare must be related to family growth, and in such a way as to promote the growth of large families. We will try to concentrate on the family itself and see to it that the children in a family are raised properly.) The program we are about to propose would cost from $3 billion to $4 billion per year. That is approximately the amount of money we will spend on the Vietnam War.
