The first step of Snaplr is to give it the corresponding file with all necessary settings. A second click on the file will call up the program window where you may enter all necessary parameters. The main window consists of a toolbar and an address panel that enables you to open images and insert annotations. The window's toolbar contains the most frequently used icons so that you do not have to open up the address panel. To start a capturing session, you have to position the region by selecting a screen area or an object in the main window. For instance, you may place it on the desktop, top bar, bottom bar, or your own custom window. The program uses the selected region to take a screenshot. You can specify the time span during which the capture will be made, the picture quality, and even the type of photo, which may be in color or grayscale. The image is added to the clipboard so you may copy it to the desktop and continue with your work. To clean the capture, you are allowed to remove the selected objects. The address panel is a side panel that contains the main object that will be inserted into the image. This object may be a circle, rectangle, text, a special symbol, or a picture. The tool allows you to change the attributes, like the color, size, and alignment of the object, as well as to enter text that will be placed below the photo. When the annotation is done, you can make use of the ink tool, which enables you to draw arrows or other marks that will be added to the image. The marker's dimensions, position, and color can be set. You may leave the ink objects in the image by clicking on the respective icon on the right side of the panel. Description: Snaplr Pro is a good app for creating good-quality desktop screen captures, such as zooming in on windows to show hidden details, or dropping onto a map to get a bird's-eye view of a large area. Intuitive UI For many, the tool is accessible as soon as they open it. Not only is the interface well-designed, but you also have the option to change the settings that make it look like any other Adobe Air app. You can also adjust the icons that display the menu, lock and import/export tools, video, and sound. You may also run the program in two different ways - tray or windowed.
