The update is now available for immediate download.. and this includes the calibration for the Leica S. the large iPhone XS download file includes the Camera app, Facetime, and other selected. The update is available for immediate download at.. A: This is a result of a bug on MacOS Catalina 10.15.3 that is fixed in 10.15.4. I think this should have been reported before the 1st release of 10.15.3. There are some very annoying problems introduced with 10.15.3, and even with 10.15.4 it doesn't fix the bug you are talking about. These are some examples of what I mean: macOS Catalina 10.15.3 can not run before installation USB drive, need to download macOS Catalina 10.15.4 from the App Store macOS Catalina 10.15.3 not working at all on my MacBook Pro 2017 with Touch Bar. More specifically, the trackpad doesn't even work with a USB mouse attached, and I only get the "B" and "M" keys on the keyboard (so, no "Enter" or "Delete" keys, no ESC key, no CTRL key, no ALT key) macOS

Catalina 10.15.3 not supporting S.M.A.R.T. data correctly, reboots after about 4 hours of using it There are a lot of other problems, such as: the "Keyboard" app is unable to detect the number keys on MacBook Pro keyboards properly, i.e. they are all numbered 10. 15.3 also has a "page up" key, which makes the keyboard unusable There is a fix for the issue you described: If you download and install macOS Catalina 10.15.4 from the App Store now (if you have the previous version of macOS installed, you'll have to restore your system from backup before installing 10.15.4), you will get the option to choose your default file sharing app, as you can see on the picture: There is also a fix for the other problems: You can install 10.15.4 from the App Store, and it will open the Catalina Software Update Assistant automatically, and it won't force you to install it or to update to 10.15.4 without asking. But there is no such fix for the bug you described,
