If the serial number supplied is a part of or near the serial number of a product, possible matches can now be rejected with a warning. Such warnings help provide a cleaner search experience as the matches returned by the search algorithm include only those that describe the product the user is most likely looking for. If left unchecked, all matches will be returned. For details, see the Search Settings section of the Advanced Settings. The reply is parsed by SerialHDRReplyParser.cpp and an ack packet is returned to the client. The telnet session will then terminate when the command is completely processed. At this point the client is free to disconnect from the router and the serial port. This issue was addressed in KB5012414. Some devices might take up to seven (7) days after the installation of KB5012414 to fully address the issue and prevent files from persisting after a reset. For immediate effect, you can manually trigger Windows Update Troubleshooter using the instructions in Windows Update Troubleshooter. If you are part of an organization that manages devices or prepared OS images for deployment, you can also address this issue by applying a compatibility update for installing and recovering Windows. Doing that makes improvements to the safe operating system (SafeOS) that is used to update the Windows recovery environment (WinRE). You can deploy these updates using the instructions in Add an update package to Windows RE using KB5012414 for Windows 11 (original release).

**\*\* Fuzzing PCAPs on a Serial ATA HDD\*\*** The fuzzers on Hacking-Distribution are using a "retaining" strategy: In the first fuzzing round, a sequence of bytes is inserted into the captured data. The sequence of bytes is kept until the given total target length is reached. Subsequent fuzzing rounds use different, smaller segments as targets, and the fuzzer tries to find a pattern in each sub-segment that matches the master sequence. This approach is very fast: 1) The target is shortened after every successful step, 2) The target is shifted during every loop iteration, and 3) The target is stored into a fixed data format. A discussion

of this strategy was held on the email list. With the help of Renaud Deraigers, in the framework of the "Shoot the Bullet" project, various aspects of it have been implemented into the fuzzing software. A PCAP is recorded while a Hacking-Distribution target is either attached or connected to a Hacking-Distribution target. The PCAPs are stored on a specific partition on the HDD. The PCAPs can be read by Hacking-Distribution Fuzzer, WAFullsource, and USB-Serial Fuzzer. The fuzzers are using the same strategy. Shrinking of the PCAPs is done over the Hacking-Distribution 0x3300 partition. The bandwidth limitation is implemented in the high-level generic fuzzer code. How the fuzzers work: USB-Serial Fuzzer uses a cron-job to schedule fuzzing sessions on a Hacking-Distribution target. The high-level generic fuzzer code reads a specified number of PCAPs and reads the PCAPs in a loop until a maximum of 100 fuzzing runs are completed. The PCAPs can be chosen by name or by number. WAFullsource uses a cron-job to schedule fuzzing sessions on a Hacking-Distribution target. The high-level generic fuzzer code reads a specified number of PCAPs and reads the PCAPs in a loop until a maximum of 100 fuzzing runs are completed. The PCAPs can be chosen by name or by number. Hacking-Distribution Fuzzer uses fuzzing sessions that are queued up in the fuzzer's internal queue. The high-level generic fuzzer code is run by a Linux sub-shell that works like a small script using a loop. It deletes the previous session if the session has already run 100 times, which leads to fast optimization. The number of fuzzing sessions is stored in the data-format. The PCAPs can be chosen by name or by number. In the case of USB-Serial Fuzzer, the PCAPs are read while attached to a target. In the case of WAFullsource, the PCAPs are read before the target is plugged into the USB port. In a test-mode, the PCAPs are chosen from the HDD by name. For practical testing of the fuzzers' capabilities, refer to the fuzzing manual. An analysis of the fuzzers was held on the email list. \*\* DESCrypto Tests on ROMless SD Cards\*\* \*\* DESCrypto v1.23.17\*\* \*\* Open Source DES\_Crypto Problembuild\*\* The fuzzers on Hacking-Distribution have recently been updated to include the newest ROMless SD cards by Synopsys. 5ec8ef588b
