Welcome to the first in a continuing series of posts reflecting on the history and wisdom of "Old" Questions. From Old Questions, we hope to encourage the contemporary reader to think about questions which have been important in the past and which continue to resonate. We begin with one of the world's oldest scientific disciplines. In early medicine, the historian of science David Woodward once noted, "the facts were deemed to be the special province of the pneuma and were not thought of as being

What's New in the JFile Splitter?

JFile Splitter is a small, simple and handy tool that has been specially developed to help you split or merge the files you need or want. JFile Splitter was built using the Java programming language and can run on all the major operating systems available. Splitting JFile: By using the program, it is possible to split a JFile into multiple JFiles. The structure of these files depends on the extension of the source file. In addition, you can also split JFiles into multiple JFiles. Splitting JFile is not the same as splitting the content of the file. When the source file is split into two JFiles, then the file structure remains the same. In addition, when the JFile is split by the program, there will be a minimum of duplicate content. Merging JFiles: JFile Splitter has other uses. It is used to merge the files. However, JFile Splitter saves time and you do not have to merge the files manually. After you have the JFile Splitter program, you can run it to merge the contents of a single JFile into multiple files. Using JFile Splitter JFile Splitter saves time because the program automatically splits the content of the files into multiple files. The following information illustrates how to use the program: Installation Instructions: The JFile Splitter program is freeware and it can be easily installed. You will not have to pay anything to download it from the Internet. Select the program, then double-click the executable file. A short installation wizard will appear and it will guide you through the installation process. You can run the program at any time by double-clicking its icon. How to use the program: The JFile Splitter program contains a simple and easy to use interface. Press the button Splitter and the JFile Splitter will automatically open. Choose the JFile which you want to split or merge. Click the button Split or Merge. Specify the other JFile Splitter file or files to which it should be merged or split. Leave all the other options as they are and press the Splitter button. Afterwards, JFile Splitter will open and the split or merge file will be shown at the bottom of the window. It will be placed in the default location of the folder specified. To get to the location of the split or merge file, select the button Go in the main window.

System Requirements:
