Docker Pull Command.Our Mission Musicians strengthen their understanding of music by mastering the skills of solo and ensemble playing. It is our mission to use the study of music and music appreciation to prepare young people for the future by establishing musicianship as a vital component of the learning process. Through structured and creative instruction we inspire students to become self-reliant musicians, develop independent thought, and deepen their appreciation of and respect for the music they love. We envision a time when every music student in every school in every city in every state in the U.S. will have access to the study of music, and the tools to teach music and to express themselves through music as they see fit. St. Louis, Mo. The mother is facing felony burglary and misdemeanor battery charges. Michelle Glass, 7, and her grandmother, Paula Lewis, 51, were shot to death Dec. 4 as they slept in their home on Wallace Street. Investigators said Larry Glass, 72, killed the mother and grandmother after becoming increasingly dissatisfied with Glass' bizarre behavior, including spending time alone, wearing adult clothing and playing with a crack pipe. Larry Glass is charged with four counts of second-degree murder, two counts of first-degree assault and one count each of tampering with physical evidence and unlawful use of a weapon. The most recent case is unrelated to the incident, but the court records indicate that Dwight Faison was a suspect in an incident on Oct. 6 in which glass fragments found at the scene of a burglary were later determined to have come from a gun. In December, he was accused of shooting two men who were trying to break into a friend

I just want to remove the first four lines and keep the rest. I use sed -i "s/^.\*/xxxx/g" output.txt. A: sed -i.bak/s/^(CRACK FOUND).\*/1/g' output.txt that should do it for the first 4 lines. Thyroiditis-induced exogenous thyroxine autoantibodies: stimulation of thyroid secretion by deiodination in vitro of thyroxine to tri-iodothyronine. In an immunochemical study, antibodies against thyroid-hormone-binding globulin (TBG) were demonstrated in rabbits with thyroiditis induced by thyroxine (T4) in lactose (T4-lactose). After the antibodies were absorbed with T4-lactose, they could be detected in autologous sera by specific thyrotropin (TSH)-binding inhibition. The T4-lactose-absorbed antibodies bound to isolated TBG but not to thyroid-hormone-binding globulin (TBG). Thyroid secretion in vitro, when the isolated thyroid cells were incubated with T4-lactose-absorbed anti-TBG antibody and TBG, was shown to be stimulated by deiodination of T4 to 3,5,3'-triiodothyronine (T3), although the T3 concentration was extremely low. The results indicate that antibodies against TBG bind to TBG and activate thyroid secretion in vivo and in vitro by a process of T4 to T3 deiodination in the thyroid gland.Multiple role of p53 in transcription, recombination and apoptosis. The tumour suppressor p53 is a transcription factor that controls the expression of a number of genes involved in cell cycle arrest, senescence, cell differentiation and apoptosis. p53 binds to specific DNA sequences, DNA loops, to regulate gene expression, and also can be associated with DNA to regulate non-histone proteins. Some of the non-histone proteins include SMARCB1/SNF2H, RAP1, BRG1 and different types of chromatin remodelling complexes. p53 is activated by different cellular stress, such as DNA damage, oncogenic signalling, and hypoxia. It is involved in both the canonical and non-canonical functions of p53 in the regulation of transcription
